

Hi Everybody. Please find below your feedback in black. I only edited a few things out so your identify isn't know. My response to some of your statements is in purple italics. Some of you are concerned about the midterms. Please see last year's midterms. You can access past classes from our main webpage.

*Thanks for your comments, below.
Pete*

I feel like I can do well in this class if I just sit down and watch the videos on time. The first homework set was really hard so I searched online a lot. I really just need a day to catch up in this class because I prioritized my major classes and tried getting all the work done. I actually really like this class. I feel like having professors who actually care ultimately leads to student success. *I encourage you to get together with others from the class and work through problems together.*

I have just started in the work in this class so I feel a bit lost but hopefully I can catch up! ☺
-Thank you

HEY!!

I love how passionate you are about the subject. It is a little hard to learn through videos, however it is a really efficient use of time. Love the articles!! Very informative over all. Thank you!!

The videos are not my favorite way to learn, but I need to start taking notes while watching them!

I find the class very interesting, but there is a lot of physics that I do not understand since I haven't taken a class in physics before.

I feel this class is very interesting, but I am unsure how the midterm will be. We read articles and learn equations but only math I part of the tests. How important is it to know the article materials & concepts in the videos? *Great (and very important) question. Please go to last year's class (link at the top of our class), and see what their midterms were like. There's not that much math. However, there is some technology... like causes and effects of climate change, how engines work, how electricity is generated.*

I enjoy this class as one of my favorite this quarter. It does feel free/open at some times, but I've told my roommate ho it does cause us to learn more in labs/videos. I wish more classes had this mentality/structure and maybe I would've been more excited to take certain classes in the past. Keep up the great work!

The class has seemed like a lot so far but I have never taken physics so that might be part of the problem. I'm sure everything will come in time.

I think it be helpful to have more worksheets to understand the technical part a little bit more and how to interpret a question. I also find it difficult to round #s from general knowledge like population size & earth's circumference.

I never had a physics/calc class, so the labs and homework are definitely a challenge, but I love learning these new topics about how energy works...in the end it evens out.

I am still having trouble with the calculation portions but I am working on reviewing the videos and redoing problem sets.

More field trips.

Bring solar panels to top of Baker for sunset. Make measurements, drink iced tea.

I enjoy the class. The quantitative parts can be difficult at times, but so can the conceptual parts. Overall, I like the challenge and learning things new.

Cheers,

I think these topics are extremely interesting but at times I don't feel I fully understand the goal of the class. Using the same videos as the physics students can be a little over-whelming at times, especially since I am still not fully sure what is expected of me for midterms (calculation-wise). The articles have been awesome and I feel that the class talks have been intriguing. Overall, I like the class. [I think it would be a good idea to look at the midterms from last year.](#)

I find the videos interesting, although sometimes it's frustrating when there's no plan for class and I won't feel like I've gained much in the hour's time.

I like how organized the website is and how clear the schedule is. Especially how easy it is to work ahead.

I have enjoyed this class thus far, but I do feel a little stressed with all the information given in small bursts of time.

Part of this I'm sure is my lack of organization and things I have on my plate.
